POP (Persistent Organic Pollutants)

Manufacturer Declaration of Conformity

Persistent organic pollutants (hereafter abbreviated to POPs) are halogenated organic compounds that originate in large quantities from industrial activities and industrial products such as electrical and electronic equipment and other products. They pose a major threat to human health and the environment. Exposure to POPs can lead to cancer, endocrine disruption, reproductive and immune disorders, and neurobehavioral and developmental problems.

Traco Electronic AG (TRACO) hereby declares that all TRACO POWER products do not contain POPs.

TRACO does not directly purchase any POPs.

TRACO POWER products have been manufactured without the intentional use of POPs.

TRACO has processes and procedures in place to ensure that our suppliers meet our expectations. We have communicated our requirements to our suppliers to ensure that POPs are not used in our products. We have subsequently obtained declarations from our suppliers confirming their commitment and upstream due diligence.

TRACO is diligently working to ensure that our supply chain is and remains free of POPs. Please contact us if you have any further questions about our program.

A handwritten signature in blue ink, appearing to read "S. Schaffhauser".
